Calibration and Functionality Checks for Axciton Systems Polygraph Equipment

All Axciton computerized polygraph systems, are delivered from the factory with all necessary calibration procedures completed. Users of Axciton Polygraph systems are not required to perform any routine calibration or functionality checks to ensure the proper functioning and accuracy of the equipment. Users may choose to perform periodic functionality checks to verify proper operation in accordance with their local governing guidelines. In keeping with ASTM standards and best practices as defined by the American Polygraph Association, Axciton Systems recommends performing functionality checks when the examiner suspects a functionality problem.
